CMX SPONSORS TRAFFIC LEGISLATION SEMINAR

Free Seminars on Recent Municipal and County Traffic Changes

MANALAPAN, NJ – MARCH 18, 2009 – CMX, a national engineering and consulting firm, has been hosting a free seminar called “Traffic Control Independence.” The seminar is in response to recent changes in legislation by the NJ Department of Transportation which can have a major impact on a community’s ability to regulate local roadways, signals, intersections, speed limits and parking. In September 2008, DOT enacted these new policies that now allow municipalities the ability to make certain engineering decisions without NJDOT approval. The purpose of the seminar is for municipalities to learn what advantages and challenges the DOT’s new policy provides and what municipalities need to know about implementing traffic control devices and regulations.

Lynn LaMunyon, the CMX Business Unit Leader of Traffic Signals & Safety, has been teaching the training classes to various municipal officials interested in traffic-related issues, including municipal administrators/managers, traffic safety officers/chief of police and Department of Public Works Directors.

“CMX has taken a great initiative to help municipalities understand these new policies,” said George McCann, Chief Executive Officer at CMX. “Lynn has done an excellent job with teaching and training these individuals.”

CMX is hosting these seminars in different offices throughout New Jersey. A continental breakfast will be served. For more information visit, www.cmxengineering.com or contact Lynn LaMunyon at llamunyon@cmxengineering.com.
